

SawStop

For Education

It just makes sense.

The Risk

- Over 1,500 middle and high school students will suffer life-changing injuries while using table saws this year.
- Many of these accidents result in amputation of fingers or even entire hands.
- These injuries will cost schools millions of dollars!
- **If you could buy a saw that could prevent these accidents, why wouldn't you?**

SawStop establishes new safety standards for table saws and makes all other saws obsolete. In fact, injuries occurring on saws not equipped with blade stopping technology expose schools to significant liability risk because safer saws are now available.

SawStop saws are being used in hundreds of schools in the United States and Canada and they have saved the hands of many students. Here's what teachers are saying:

Beating the Odds

"Today, that (SawStop) saw saved one of our student's thumbs."

"Thank you! Thank you! Our school purchased a new SawStop several months ago. Today, that saw saved one of our student's thumbs."

"One of our sophomores was cutting on the table saw and encountered a situation where his thumb ran into the blade. BANG! The saw stopped rotating and dropped out of sight. We looked at his fingers and found a slight paper-cut-like scratch on his thumb. He was also able to walk away from the shop and say, today I made a mistake, but I still have all my fingers. Once again, thank you!"

Scott S., Shop Teacher, Princeton, WI

"Any educational shop that does not provide this level of safety is being negligent."

"Any educational shop that does not provide this level of safety is being negligent. This technology is revolutionary. I no longer worry that somebody will be injured using our table saws when I'm at work or away. These table saws actually let me sleep better at night...Priceless."

Kevin G., Shop Teacher, Minneapolis, MN

"... this is the best built saw I have ever seen."

"I want to commend you on your product. I have been a shop teacher for 10 years and this is the best built saw I have ever seen."

Mike S., Shop Teacher, Jennings, MO

SawStop

For Education

It just makes sense.

"A minor cost compared to the alternative."

"Last year, the University bought our Materials Lab a new SawStop saw. Such foresight and generosity has saved me a layer of worry and the university a great measure of worry and liability, not to mention my grad assistant's lack of pain and suffering. My grad assistant set off the safety feature on our new table saw and walked away with a minor scratch. Not even a bandage was needed! Due to our new SawStop table saw, there was no incident to report.

The blade retracted so fast that my grad assistant didn't know what happened. He called me and told me he had broken the saw. It took me five minutes to replace the blade and safety cartridge. A minor cost compared to the alternative. I also made it clear to my assistant what he did wrong and the simple steps he needs to take to avoid doing it again. This is a valuable lesson without the pain, one that he can pass on to our students and in his future career."

Rich G., Director of Materials Lab, NC

"The worst part is the guilt..."

"The worst part is the guilt of knowing that you sent a kid to the hospital. The guilt that you feel knowing that this kid's life has changed, that he is suffering and that you have sent him out into the world without the use of three fingers for the rest of his life. When I saw your cabinet saw demonstration I bought one. It is awesome!"

Jerry K., Shop Owner, CA

"... Had this been any other saw, he would have lost (his thumb)."

"As the Construction teacher at the high school and a Journeyman Carpenter, I was relieved to have one of our four SawStop saws, do as it should when a student came in contact with the blade. He was ripping a piece of spruce stock and his support hand came in contact with the blade.

The cut was just below the first knuckle of the thumb and in my opinion, had it been any other saw, he would have lost it. The injury consisted of a slight cut. The reason for our desire to share this story is due to our complete satisfaction with the product. It has made our school a safer place to work and learn. In 20 years of using table saws, these saws are the finest operating saws I have used and seen; the added technology truly makes them superior to any other.

With Thanks,"

James K., Shop Teacher, SK, Canada

"Safety is good business."

"I commend SawStop for taking the initiative to help create a safer saw. Safety is good business."

Ann Brown - Former CPSC Chairman
